Information on toxicological effects

Symptoms No information available.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Carcinogenicity Chronic effects were observed in liver, kidney, heart and blood chemistry. The International Agency for Research on Cancer (IARC) lists exposure to chlorophenoxy herbicides as a class 2B carcinogen, the category for limited evidence for carcinogenicity in humans. However, more current 2,4-DB lifetime feeding studies in rats and mice did not show carcinogenic potential.

Irritation	Eye,rabbit: Severe / Corrosive
Eye damage/irritation	No information available.
Skin Corrosion/Irritation	No information available.
Sensitization	Repeated contact may cause allergic reactions in very susceptible persons.
Reproductive Effects	No impairment of reproductive function attributable to 2,4-DB has been noted in laboratory animal studies. At doses toxic to parental animals, there were effects to kidneys, adrenals and ovaries of offspring. At the highest dose, offspring mortalities and growth reductions were observed during lactation.
Mutagenic Effects	No information available.
Developmental Effects	Studies in laboratory animals with 2,4-DB have shown early resorptions, decreased fetal body weights and skeletal variations in the offspring at doses toxic to other animals. These are considered to result from maternal toxicity.
STOT - single exposure	No information available.
STOT - Repeated Exposure	No information available.
Chronic Toxicity	Avoid repeated exposure.
Target Organ Effects	Repeated overexposure may cause effects to: Liver, Kidney, Heart, Thyroid, Adrenals, Blood, Stomach, Reduced body weight, Eyes, Skin.
Aspiration Hazard	No information available.
