Information on toxicological effects

Symptoms May cause redness and tearing of the eyes. May result in permanent damage including blindness. May cause skin irritation.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Sensitization Based on available data, the classification criteria are not met.
Germ cell mutagenicity Based on available data, the classification criteria are not met.
Carcinogenicity Not classified as a carcinogen by IARC, ACGIH, NTP or OSHA.

An increase in the combined incidence of liver adenoma and carcinoma was observed in mice at dietary doses of 37.5 mg/kg/day over an 18-month period. Increases in liver neoplastic nodules and foci of cellular alteration (possible precursors to tumors) were noted in rats at dietary doses of 50 mg/kg/day over two years. This evidence indicates that at very high doses, Lactofen may show some carcinogenic activity. It is classified by EPA as a B2 (probable) human carcinogen.

Reproductive toxicity Based on available data, the classification criteria are not met.
STOT - single exposure Based on available data, the classification criteria are not met.
STOT - repeated exposure Based on available data, the classification criteria are not met.
Chronic toxicity May cause adverse liver effects.
