IMPREGNATION RATES: DRY FERTILIZERS

Recommended rate range is 1 to 4 gallons of **Accomplish**® per ton of dry fertilizer depending on makeup of dry fertilizer blend. Blends that contain both potassium and phosphate inputs will absorb more **Accomplish** than those made from a higher percentage of urea. Higher rates of impregnation are possible when fertilizer handling systems are capable of adding drying clay. Contact your Loveland Products representative for specific information.

PRE-BLENDING OR TANK MIXING RATES: LIQUID FERTILIZERS

If mixing with liquid fertilizer or herbicides, perform a Jar Test to assure compatibility with different mixtures of chemicals. It is typically recommended to mix in the following order: fertilizers, chemicals, water, and **Accomplish**. Do not mix with fungicides EXCEPT Azoxystrobin products. Liquid fertilizers in the pH range of 5 to 9 are compatible with **Accomplish**.

Product is guaranteed effective up to 2 years after date stamped on label.
