USE RATE GUIDELINES

The following table is to be used as a guide for the use of CELLSTRONG 5-0-0. Apply as needed based on soil tests or according to recommendations in your nutrient management plan. Recommended standard rate is 1.0 to 2.0 quarts per acre in a minimum of 5.0 gallons of water. Applications in smaller volumes of water may cause foliage burn. Larger quantities of water will improve coverage. Repeat applications at 10- to 14- day intervals as needed. This product may be applied by air, or by ground-dilute or ground-concentrate applications. Contact your Loveland Products representative for specific information.

Due to the relative immobility of Calcium and Zinc within plant tissues, and their deficiencies being expressed at terminal growth points or at sites of fruit bud formation, multiple applications during periods of rapid growth and fruit formation should be made for maximum effectiveness.

This product is suitable for foliar applications to all crops which require supplemental Nitrogen, Calcium, or Zinc for maximum yield or quality. Always provide for thorough coverage.

GENERAL INFORMATION

Addition of suitable nonionic surfactants, such as Activator 90®, is recommended to improve plant uptake by increasing coverage of foliage.
