Guaranteed Analysis

Total Nitrogen (N).....5.0%

5% Ammoniacal Nitrogen

Zinc (Zn).....6.0%

Derived from: Aqua Ammonia & Zinc Oxide

**ALSO CONTAINS NON-PLANT FOOD INGREDIENTS:
20% Plant Extract Solution**

GENERAL INFORMATION

CHB CRJ Zinc 6% is manufactured specifically as a liquid side dress & water run zinc to be used to help prevent and correct zinc deficiencies that may limit crop growth and yields. CHB CRJ Zinc 6% is a supplement to an adequate and balanced soil fertility program.

CHB CRJ Zinc 6% is a complex mixture of zinc with nitrogen. It is important to monitor crop needs and responses by maintaining an adequate tissue-testing program. When unfamiliar with the effects of foliar applications of minerals it is recommended to perform small-scale field trials.

DIRECTIONS FOR USE

Mixing Directions - Be sure spray tank is thoroughly cleaned, fill 1/3 full with clean water, add product and continue filling with agitation. Always add this product to tank before adding pesticides.

Compatibility - CHB CRJ Zinc 6% is recommended to be applied with an in row or sidedress starter fertilizer. Always do compatibility tests before mixing with phosphate products. If any precipitation occurs, it may be necessary to add a compatibility agent. Consult your Bio-Gro dealer for more information.

Applications - CHB CRJ Zinc 6% can be applied by ground and aerial equipment, drip or overhead irrigation systems.

Dilution and Spray Volumes - Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets. It

is recommended to use a dilution of at least 50 parts of water to 1 part of CHB CRJ Zinc 6%.

SUGGESTED APPLICATIONS

Optimum rate of application will vary between fields depending on soil and/or climatic conditions, stage of crop growth and size of plants. Application rates are best determined by soil and plant analysis recommendations.

CHB CRJ Zinc - 6% can be used on many crops where soil applied zinc applications are commonly used. Consult your Bio-Gro dealer for specific recommendations.

Trees and Vines: Apply 1-2 quarts per acre through the drip or irrigation system in the spring and post harvest on established trees and vines. 8 oz to 1 quart per acre on new plantings.

Field Crops: Beans, peas, corn, potatoes, soybeans, etc. Apply 1 to 2 pints/acre with liquid fertilizer placed near the seed or in a sidedress prior to 40% of full plant height.

Vegetable Crops: Asparagus, celery, cole crops, cucurbits, lettuce, melons, onions, garlic, peppers, spinach, strawberries, tomatoes, etc. Apply 1 to 2 pints/acre during periods of rapid growth or nutritional stress.

Cereal Crops: Wheat, barley, oats, rice, rye, etc. Apply 1-2 pints/acre at planting.

CHB CRJ Zinc - 6% should be used specifically for soil application in bands with starter fertilizer applications. Use the appropriate CHB mineral for water run and/or drip applications.

TIMING - Application timing is likely the most important factor in determining the response and value of all soil applied nutrients. Understanding the basic physiological functions of a crop is essential in planning proper nutrient timing.

Never Foliar apply CHB CRJ Zinc 6% at more than 1 pint per acre. ALWAYS dilute at least 50 parts of water to 1 part of CHB CRJ Zinc 6%. If applications are required other than soil banding, water run applications are recommended in place of foliar applications

CONDITIONS OF SALE

Seller and/or manufacturer warrants only that this product consists of the ingredients specified on this label. No one is hereby authorized to make any warranty and/or guarantee concerning the use of this product. Being that the use, timing, placement, rate, application and other conditions are beyond the control of the seller and/or manufacturer, the seller's and/or manufacturer's liability for handling, storage and use of this product is limited to replacement of product or refund of purchase price.
