

Methoxyfenozide	GROUP	18	INSECTICIDE
Acetamiprid	GROUP	4A	INSECTICIDE

ENKOUNTER™

INSECTICIDE

ACTIVE INGREDIENTS:

Methoxyfenozide: Benzoic acid, 3-methoxy-2-methyl-, 2-(3,5-dimethylbenzoyl)-2-(1,1-dimethylethyl) hydrazide 24.0%
 Acetamiprid: (E)-N¹-[(6-chloro-3-pyridyl)methyl]-N²-cyano-N¹-methyl acetamidine 15.0%

OTHER INGREDIENTS: 61.0%

TOTAL: 100.0%

Contains 0.24 lb ai methoxyfenozide active ingredient and 0.15 lb ai acetamiprid active ingredient per pound of product.

EPA Reg. No. 70506-337

KEEP OUT OF REACH OF CHILDREN

CAUTION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
 (If you do not understand the label, find someone to explain it to you in detail.)

FIRST AID	
If swallowed:	<ul style="list-style-type: none"> • Call a poison control center or doctor immediately for treatment advice. • Have a person sip a glass of water if able to swallow. • Do not induce vomiting unless told to by a poison control center or doctor. • Do not give anything by mouth to an unconscious person.
If on skin or clothing:	<ul style="list-style-type: none"> • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15 - 20 minutes. • Call a poison control center or doctor for treatment advice.
If in eyes:	<ul style="list-style-type: none"> • Hold eye open and rinse slowly and gently with water for 15 - 20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing. • Call a poison control center or doctor for treatment advice.
<p>Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For emergency medical assistance, call Rocky Mountain Poison and Drug Safety at 1-866-673-6671.</p>	

See inside for additional Precautionary Statements and complete Directions For Use.

FOR CHEMICAL EMERGENCY: Spill, leak, fire, exposure or accident, call CHEMTREC at 1-800-424-9300.

 King of Prussia, PA 19406 U.S.A. • 1-800-438-6071

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if swallowed. Harmful if absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS

Aerial applicators must be in enclosed cockpits. When handlers use closed systems, enclosed cabs or aircraft in a manner that meet the requirements listed in the Worker Protection Standards (WPS) for agricultural pesticides [40 CFR 170.240(d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove contaminated clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to birds and aquatic invertebrates. This product is toxic to bees exposed to direct treatment. Do not apply this product while bees are foraging in the treatment area. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate. Do not contaminate water used for irrigation or domestic purposes.

Groundwater Advisory

This chemical has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Surface Water Advisory

This product may impact surface water quality due to runoff of rain water or through spray drift. This is especially true for poorly draining soils and soils with shallow groundwater. This product is classified as having high potential for reaching surface water via runoff for several months or more after application. Avoid accidental or intentional application of this product to ditches, swales, drainage ways or impervious surface such as driveways. Runoff of this product to surface water will be reduced by avoiding applications when rainfall is forecasted within 48 hours. Do not cultivate within 10 feet of aquatic areas to allow growth of a vegetative filter strip.

Do not apply by ground within 25 feet, or by air within 150 feet, of lakes, reservoirs, rivers, permanent streams, marshes, or natural ponds; estuaries and commercial fish farm ponds. Do not apply where runoff is likely to occur.

Endangered Species

The following applies to use of this product in Michigan (Allegan, Monroe, Montcalm, Muskegon, Newaygo, or Oceana counties) or Wisconsin (Adams, Burnett, Chippewa, Clark, Door, Eau Claire, Green Lake, Jackson, Juneau, Marquette, Monroe, Polk, Portage, Waupaca, Waushara, or Wood counties).

It is a Federal offense to use any pesticide in a manner that results in the death of an endangered species. Use of this product may pose a hazard to endangered or threatened species. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the area

in which you are applying the product. To obtain Bulletins, no more than six months before using this product, consult <http://www.epa.gov/espp/>. You must use the Bulletin valid for the month in which you will apply the product.

SENSITIVE AREAS

The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas).

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Not for residential use.

Not for Sale, Use, or Distribution in Nassau County and Suffolk County in New York State.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and expectations pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated area until sprays have dried.

PRODUCT INFORMATION

ENKOUNTER™ Insecticide is a novel premix that contains two proven modes of action that:

1. Mimics the action of the molting hormone of lepidopterous larvae. Upon ingestion, larval stages of the order lepidoptera undergo an incomplete and developmentally lethal premature molt. This process interrupts and rapidly halts their feeding. Feeding typically ceases within hours of ingestion, although complete mortality of the larvae may take several days. Affected larvae often become lethargic and often develop discolored areas or bands between segments; and
2. Controls many sucking and chewing insects, and controls target insects through contact and ingestion.

ENKOUNTER is rapidly absorbed by the plant tissue and quickly moves via systemic translaminar activity to protect the entire leaf. Thorough spray coverage is essential for optimal control.

It is always important to implement a good Integrated Pest Management (IPM) program. ENKOUNTER Insecticide belongs to both the diacylhydrazine class, and cyano neonicotinoid classes of insecticides.

Use Rate Determination

Please carefully read and follow all label use rates and restrictions. Always ensure aerial or ground equipment is properly calibrated before use. Prepare only the amount of spray solution required to treat the application acreage.

Use the higher specified rates for moderate to heavy infestations of pest spectrum being treated.

Mixing Directions

Application Rate Reference Table

Application Rate of ENKOUNTER Insecticide (oz/acre)	Active Ingredient Equivalent Methoxyfenozide (lb ai/acre)	Active Ingredient Equivalent Acetamiprid (lb ai/acre)	Acres per Pound of ENKOUNTER Insecticide
3 oz/A	0.0450 lb ai/A	0.0281 lb ai/A	5.3 A/lb
4 oz/A	0.0600 lb ai/A	0.0375 lb ai/A	4.0 A/lb
5 oz/A	0.0750 lb ai/A	0.0469 lb ai/A	3.2 A/lb
6 oz/A	0.0900 lb ai/A	0.0563 lb ai/A	2.7 A/lb
7 oz/A	0.1050 lb ai/A	0.0656 lb ai/A	2.3 A/lb
8 oz/A	0.1200 lb ai/A	0.0750 lb ai/A	2.0 A/lb
9 oz/A	0.1350 lb ai/A	0.0844 lb ai/A	1.8 A/lb
10 oz/A	0.1500 lb ai/A	0.0938 lb ai/A	1.6 A/lb
11 oz/A	0.1650 lb ai/A	0.1031 lb ai/A	1.5 A/lb
12 oz/A	0.1800 lb ai/A	0.1125 lb ai/A	1.3 A/lb
13 oz/A	0.1950 lb ai/A	0.1219 lb ai/A	1.2 A/lb
14 oz/A	0.2100 lb ai/A	0.1313 lb ai/A	1.1 A/lb
15 oz/A	0.2250 lb ai/A	0.1406 lb ai/A	1.1 A/lb
16 oz/A	0.2400 lb ai/A	0.1500 lb ai/A	1.0 A/lb
20 oz/A	0.3000 lb ai/A	0.1875 lb ai/A	0.8 A/lb

ENKOUNTER Insecticide – When Used Alone

Mixing order when used alone.

1. Prepare only enough spray mixture as can be applied on the day of mixing.
2. Fill the spray tank 1/4 (one-fourth) to 1/2 (one-half) full of clean water;
3. Begin agitation and add product;
4. Continue to fill tank and maintain agitation in the spray tank during mixing;
5. Allow mixing in tank for 2 minutes after filling or until thoroughly mixed before applying;
6. Maintain continuous agitation during mixing and application to assure uniform suspension. If mixture sits without agitation for extended periods, agitate the mixture for at least 10 minutes before use;
7. Equip spray system with a 50-mesh inline filter, which will protect nozzles that are typically used. Nozzles may also be equipped with 50-mesh nozzle filters or 25 to 50 mesh (equivalent) slotted nozzle filters;
8. ENKOUNTER is unstable in water pH below 4 and above 9. If necessary, buffer water to obtain optimum pH range;
9. Triple rinse empty container, and add rinsate to the spray tank.

ENKOUNTER Insecticide – When Used in a Tank Mix

It is the pesticide user's responsibility to ensure that all products in the tank mix are registered for the intended use. Users must follow the most restrictive directions and precautionary language of the products for the mixture.

When tankmixing ENKOUNTER with other products, introduce the products into the tank in the following order:

1. Water soluble packets,
2. Wettable powders,
3. Water dispersible granules (such as ENKOUNTER Insecticide),
4. Flowable liquids,
5. Emulsifiable concentrates,
6. Adjuvants and/or oils (do not use stickers).

Always allow each product to fully disperse before adding the next product. Prepare only enough spray mixture as can be applied on the day of mixing.

ENKOUNTER Insecticide is believed to be compatible with most commonly used agricultural insecticides, fungicides, growth regulators, foliar fertilizers and spray adjuvants. However, always conduct a compatibility test whenever preparing a new tank mix by mixing proportional amounts of all spray ingredients in a test jar. Shake the mixture vigorously and allow it to stand for 15 minutes. Rapid precipitation of the ingredients and failure to re-suspend when shaken indicates that the mixture is incompatible and should not be applied.

Application Timing

ENKOUNTER Insecticide activity is expressed primarily through contact and ingestion by the target larvae. Therefore, the timing of application is dependent upon the feeding behavior of the target pest. Re-application may be required to protect rapidly expanding fruit, new flushes of foliage, or for extended infestations. The re-application interval will vary depending upon how rapidly the crop is growing, the generation time of the target pest and the duration of the infestation.

See **DIRECTIONS FOR USE** for best application timing by pest. Consult the Cooperative Extension Service, or other qualified professional authorities, to determine the appropriate threshold and timing for application in your area.

Application Directions

Applications must be in a manner that assures uniform and thorough coverage as ENKOUNTER Insecticide must come in contact with and/or be ingested by pests to be fully effective. Higher water volume and increased spray pressure generally provide better coverage.

It is important to obtain thorough and uniform spray coverage. For ground and aerial applications, select nozzles and pressure that deliver MEDIUM to COARSE spray droplets as indicated in nozzle manufacturer's catalogs and in accordance with ASABE Standard S-572. The use of spray adjuvants, such as high quality non-ionic surfactants, silicone surfactants, methylated seed or horticultural oils (depending on crop being treated) may enhance coverage and plant uptake and improve insect control. The use of stickers is not recommended. Some adjuvants can cause adverse effects, such as spotting or burn to fruit or foliage. Select an adjuvant that will be safe to the target crop. Use higher dosage rates for heavy infestations or dense foliage growth.

For orchard crops, aerial applications may not provide as thorough coverage as ground applications. It is important to obtain thorough and uniform spray coverage. Choose a finished spray volume appropriate for the size of tree or vine and amount of foliage which will provide thorough coverage throughout the canopy.

To clean the sprayer after use, drain and flush with water. Use rinsate on crop according to label instructions or dispose of in an approved manner. See **STORAGE AND DISPOSAL**.

Spray Drift Management

Adhere to the following buffer zones when applying this product near aquatic habitats (such as lakes, reservoirs, rivers, permanent streams, marshes, or natural ponds; estuaries and commercial fish ponds):

Application Method	Buffer Zone (feet)
Airblast	25
Aerial	150

SPRAY DRIFT REQUIREMENTS

SPRAY DRIFT

Aerial Applications:

- Do not release spray at a height greater than 10 ft above the vegetative canopy, unless a greater application height is necessary for pilot safety.
- Applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Do not apply when wind speeds exceed 15 mph at the application site. If the wind speed is greater than 10 mph, the boom length must be 65% or less for fixed wing aircraft and 75% or less for helicopters. Otherwise, the boom length must be 75% or less for fixed-wing aircraft and 90% or less for helicopters.
- Applicators must use 1/2 swath displacement upwind at the downwind edge of the field.
- Do not apply during temperature inversions.

SPRAY DRIFT

Airblast Applications:

- Sprays must be directed into the canopy.
- User must turn off outward pointing nozzles at row ends and when spraying outer rows.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT. BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

CONTROLLING DROPLET SIZE – Aircraft

- Adjust Nozzles - Follow nozzle manufacturers recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.

RELEASE HEIGHT – Aircraft

Higher release heights increase the potential for spray drift.

SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

TEMPERATURE INVERSIONS

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND

Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS.

- Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

Handheld Technology Applications:

- Take precautions to minimize spray drift.

Rainfastness

As soon as dry. However, efficacy or residual will be reduced with exposure to rainfall or overhead irrigation.

Spray Adjuvants

The addition of agricultural adjuvants to sprays of ENKOUNTER Insecticide may improve initial spray deposits, redistribution and weatherability. Select adjuvants that are recommended and registered for your specific use pattern and follow their use directions. For adjuvants, it is recommended that you use a Chemical Producers and Distributors Association certified adjuvant. Always add adjuvants last in the mixing process.

Insecticide Resistance Management

For resistance management, please note that ENKOUNTER contains both a Group 18 Ecdysone Receptor Agonist and a Group 4A Neonicotinoid insecticide. Any insect population may contain individuals naturally resistant to ENKOUNTER and other Group 18 or Group 4A insecticides. The resistant individuals may dominate the insect population if these insecticides are used repeatedly in the same fields. Appropriate resistance-management strategies should be followed.

To delay insecticide resistance, take the following steps:

- Rotate the use of ENKOUNTER or other Group 18 and Group 4A insecticides within a growing season, or among growing seasons, with different groups that control the same pests.
- Use tank mixtures with insecticides from a different group that are equally effective on the target pest when such use is permitted. Do not rely on the same mixture repeatedly for the same pest population. Consider any known cross-resistance issues (for the targeted pests) between the individual components of a mixture. In addition, consider the following recommendations provided by the Insecticide Resistance Action Committee (IRAC):
 - Individual insecticides selected for use in mixtures should be highly effective and be applied at the rates at which they are individually registered for use against the target species.
 - Mixtures with components having the same IRAC mode of action classification are not recommended for insect resistance management.
 - When using mixtures, consider any known cross-resistance issues between the individual components for the targeted pest(s).
 - Mixtures become less effective if resistance is already developing to one or both active ingredients, but they may still provide pest management benefits.
 - The insect resistance management benefits of an insecticide mixture are greatest if the two components have similar periods of residual insecticidal activity. Mixtures of insecticides with unequal periods of residual insecticide activity may offer an insect resistance management benefit only for the period where both insecticides are active.
- Adopt an integrated pest management program for insecticide use that includes scouting, uses historical information related to pesticide use, crop rotation, record keeping, and which considers cultural, biological and other chemical control practices.
- Monitor after application for unexpected target pest survival. If the level of survival suggests the presence of resistance, consult with your local university specialist or certified pest control advisor.
- Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or IPM recommendations for the specific site and pest programs in your area.

ROTATIONAL CROP RESTRICTIONS

Following the final application of ENKOUNTER Insecticide at labeled rates for registered crop uses, the following rotational crops may be planted at intervals defined below:

Crop	Re-planting Interval
Registered crop uses	No restrictions
All other crops grown for food or feed	7 days

Note: Always refer to rotational restrictions and precautions of the most restrictive rotational guidelines when ENKOUNTER Insecticide is used in a tank mix.

USE INSTRUCTIONS

TREE NUTS (CROP GROUP 14)¹ (INCLUDING PISTACHIOS)

¹ Tree nuts (crop group 14) almond, pistachio, walnut (black and English).

Ground Application: Apply in a minimum of 50 gpa by conventional ground equipment to trees 10 feet tall or less. For trees greater than 10 feet tall, use a minimum of 100 gpa. If using other type of sprayer, apply in sufficient carrier volume to ensure thorough, uniform cover of the crop. Always use a spray volume that assures uniform coverage of the infested portions of the treated crop. Calibrate equipment to the desired spray volume.

Aerial Application: Apply in a minimum of 10 gpa. This method may result in reduced efficacy if the size of the tree or density of the foliage prohibits thorough, uniform coverage of the entire tree canopy.

Performance of ENKOUNTER Insecticide against pests not listed on this label cannot be warranted nor can crop tolerance in all types and varieties of tree nuts be assured. If unsure, the user is advised to treat a few trees to observe for symptoms before treating large blocks of trees. Generally, optimum performance against lepidoptera pests (worms) is achieved when ENKOUNTER Insecticide is applied at the initiation of egg hatch. Reapplication intervals of 14 to 20 days may be required if the plant part(s) to be protected from insect damage is rapidly growing or expanding or if pest infestations are heavy or extended.

Pests	Application Rate (oz/acre)	Application Timing	Restrictions
navel orangeworm	12 - 20 oz/A	Residual control varies by rate. Use the higher rates with the listed rate range for extended control on all, mature trees with dense foliage. For navel orangeworm in almonds, make first application at the initiation of hull split (2 to 5% hull split). Reapply 14 days later. Under heavy infestation, reapply a third time 14 days later. For navel orangeworm in walnuts, apply at initiation of egg hatch.	<ul style="list-style-type: none"> • Do not apply more than 67 oz (4.2 lbs) per acre per year. • Do not make more than 4 applications per acre per year. • Do not apply more than once every 14 days. • PHI: 14 days.

Thorough coverage is important for optimum control. Under heavy pest pressure or for extended control, use the higher end of the rate range. Residual control of labeled pests varies by rate. The use of surfactants may improve coverage.

Use of pheromone traps in conjunction with degree days are good indicators that can be used to determine spray timings.

Complete sprays (every row) are recommended.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

Pesticide Storage: Store in a cool, dry, well-ventilated area. Do not store in or around the home. Do not allow prolonged storage in areas where temperatures frequently exceed 115°F. Never transfer this product to another container for storage.

Pesticide Disposal: Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

Container Handling: Nonrefillable container. Do not reuse or refill this container.

For Rigid Container: Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill or by other procedures approved by state and local authorities.

For Non-Rigid Container: Completely empty bag into application equipment. Then offer for recycling if available or dispose of empty bag in a sanitary landfill.

IMPORTANT INFORMATION READ BEFORE USING PRODUCT

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product reflect the opinion of experts based on field use and tests, and must be followed carefully. It is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of UPL NA Inc. or Seller. Handling, storage, and use of the product by Buyer or User are beyond the control of UPL NA Inc. and Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold UPL NA Inc. and Seller harmless for any claims relating to such factors.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, UPL NA INC. AND SELLER MAKE NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ON THIS LABEL.

To the extent consistent with applicable law, UPL NA Inc. or Seller shall not be liable for any incidental, consequential or special damages resulting from the use or handling of this product and **THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF UPL NA INC. AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF UPL NA INC. OR SELLER, THE REPLACEMENT OF THE PRODUCT.**

UPL NA Inc. and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of sale and limitations of warranty and of liability, which may not be modified except by written agreement signed by the duly authorized representative of UPL NA Inc.
