DIRECTIONS FOR USE

C.O.C. is a blend of phyto bland crop oil and surfactant. This combination utilizes the penetrating, non- evaporating properties of herbicidal oil and the wetting and dispersing characteristics of a surfactant blend.

C.O.C. increases the activity of most herbicides; therefore, care must be taken in treating sensitive crops during periods when plants are subjected to drought stress, high temperatures, and high humidity. Read entire label of herbicide being used to ensure best results. Most labels will contain some of the following important information:

1. Dosage rate of crop oil
2. Volume of spray mixture
3. Methods of application, ground, air, etc.
4. Time of application

Please note: When using a new chemical or a questionable water source (High pH or hard water) always prepare a small amount and check for compatibility.

Prior to use read all directions on this label and on the label of the product used. The product label for specific usages and restrictions have precedence over directions for uses referred to on this label. Keep this container closed tight when not in use. Take care to prevent any water from being introduced to the contents of this container; even small amounts can cause performance or compatibility problems.

For low spray volume applications of insecticides, when the total spray volume is less than 5 gallons per acre, use 1 fl. oz. to 32 fl. oz. C.O.C. per acre
