Net Contents:
8.57 OZ (243 GR)

TRIBENURON-METHYL GROUP 2 HERBICIDE

For: Use on Wheat (Spring, Winter, Durum)

ACTIVE INGREDIENT: Tribenuron-methyl
Methyl 2-[[[4-methoxy-6-methyl-1,3,5-triazin-2-yl)
methylamino]carbonyl]amino]sulfonyl]benzoate 50.00%

OTHER INGREDIENTS: 50.00%

TOTAL: 100.00%

EPA Reg. No. 264-1204 EPA Est. 279-CAN-001

Produced for:
Bayer CropScience LP
800 N. Lindbergh Blvd.
St. Louis, MO 63167

181009Bv2 01/20

statements and directions for use.

FIRST AID

If on Skin:

- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

In case of emergency, call the toll-free Bayer CropScience Emergency Response telephone number: 1-800-334-7577. Have a product container or label with you when calling a poison control center or doctor, or going for treatment.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

- Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.
- Avoid contact with skin, eyes or clothing.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Read the entire label before using this product.

Bayer

7.1875"

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants.
- Chemical-resistant gloves made of any waterproof material such as polyethylene or polyvinyl chloride.
- Shoes plus socks

USER SAFETY REQUIREMENTS

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

- Users should remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Users should remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENGINEERING CONTROLS STATEMENT

When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR Part 170.240 (d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

ENVIRONMENTAL HAZARDS

Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsate.

CONDITIONS OF SALE AND LIMITATIONS OF WARRANTY AND LIABILITY

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Bayer CropScience. To the extent consistent with applicable law, all such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BAYER CROPSCIENCE MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE

(continued)

3.4"

6.875"

3.4"

OR OTHERWISE, THAT EXTEND BEYOND THE STATEMENTS MADE ON THIS LABEL. No agent of Bayer CropScience is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BAYER CROPSCIENCE DISCLAIMS ANY LIABILITY WHATSOEVER FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

LIMITATIONS OF LIABILITY: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, SHALL NOT EXCEED THE PURCHASE PRICE PAID, OR AT BAYER CROPSCIENCE'S ELECTION, THE REPLACEMENT OF PRODUCT.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Read the entire label before using this product.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas (that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water), is:

- Coveralls
- Chemical resistant gloves made of any waterproof material.
- Shoes plus socks.

PRODUCT INFORMATION

LUXXUR A HERBICIDE:

- provides control of certain broad-leaved weeds in wheat (spring, winter and durum). Warm, moist, growing conditions promote active weed growth and enhance the activity of LUXXUR A HERBICIDE by allowing maximum foliar uptake
(continued)

6.875"

and contact activity. Weeds hardened off by environmental stress such as cold weather, drought stress or excessive heat may not be adequately controlled or suppressed, and regrowth may occur. For best results, ensure thorough spray coverage of target weeds.

- Rapidly stops growth of susceptible weeds through absorption of the foliage. However, typical symptoms (discoloration) of dying weeds may not be noticeable for 1 to 3 weeks after application, depending on growing conditions and weed susceptibility. Degree of control and duration of effect depend on weed sensitivity, weed size, spray coverage and growing conditions. Activity of the herbicide mixture may be delayed by cold, dry conditions after application.

USE RESTRICTIONS

Injury to or loss of desirable trees or vegetation may result from failure to observe the following:

- Do not apply, drain or flush equipment on or near desirable trees or other plants or on areas where their roots may extend, or in locations where the chemical may be washed or moved into contact with their roots.
- Do not discharge excess material on the soil at a single spot in the field, or mixing/loading station.
- Do not apply LUXXUR A HERBICIDE to wheat that is stressed by severe weather conditions, drought, low fertility, water-saturated soil, disease, or insect damage, as crop injury may result. Risk of injury is greatest when crop is in the 2 to 5- leaf stage. Severe winter stress, drought, disease, or insect damage following application also may result in crop injury.

- Do not store pesticides near well sites.
- Do not apply to wheat underseeded with another crop.
- Pre-Harvest Interval (PHI): Do not harvest within 45 days of the last application.
- Do not apply LUXXUR A HERBICIDE within 60 days of crop emergence where an organophosphate insecticide has been applied as an in-furrow treatment because crop injury may result.
- Do not use LUXXUR A HERBICIDE plus Malathion because crop injury may result.
- Do not apply LUXXUR A HERBICIDE by air in the state of New York.
- LUXXUR A HERBICIDE is not for use in the state of California.

Grazing, Feeding, and Harvesting

- Allow at least 7 days between application and grazing of treated forage.
- Allow at least 7 days between application and feeding of forage (green chop) from treated areas to livestock.
- Allow at least 30 days between application and feeding of hay from treated areas to livestock.
- Allow at least 45 days between application and harvesting of grain. Harvested straw may be used for bedding and/or feed.

When using LUXXUR A HERBICIDE in tank mixes or sequential applications with other products containing tribenuron-methyl, do not exceed the following limits:

3.4"

6.875"

3.4"

Active Ingredient: Tribenuron-methyl						
Use	Maximum AI Oz/A per Single Application	Maximum Oz/A of Product per Single Application	Maximum AI Oz/A per Use Period*	Maximum Oz/A of Product per Use Period*	Maximum Number of Applications per Use Period*	Pre-Harvest Interval, Days
Wheat	0.25	0.50	0.25	0.50	2	45 (for grain)
* Use Period: One maximum application per year or two applications not to exceed the maximum rate per year, see above chart for specific crop restrictions.						

USE PRECAUTIONS

- Injury or loss of adjacent sensitive crops and vegetation may result from failure to observe the following:
- Take all necessary precautions to avoid all direct or indirect contact (such as spray drift) with non-target plants or areas
- Carefully observe all sprayer cleanup instructions both prior to and after using this product, as spray tank residue may damage crops other than those listed on this label.
- Varieties of wheat (including durum) may differ in their response to various herbicides. Consult your state experiment station, university, or extension agent as to crop sensitivity of any herbicide. If no information is available, limit the initial use to a small area.

- Under certain conditions such as heavy rainfall, prolonged cold weather, or wide fluctuations in day/night temperatures prior to or soon after LUXXUR A HERBICIDE application, temporary discoloration and/or crop injury may occur.
- Dry, dusty field conditions may result in reduced control in wheel track areas.
- Calibrate sprayers only with clean water away from well sites.
- Make scheduled checks of spray equipment.
- Mix only enough product for the job at hand.
- Ensure that all operation employees accurately measure pesticides.
- Avoid overfilling of spray tank.
- Dilute and agitate excess solution and apply at labeled rates or uses.
- When triple-rinsing the pesticide container, be sure to add the rinsate to the spray mix.

APPLICATION INSTRUCTIONS

Aerial Application

- For aerial application, select nozzles and pressure that deliver medium or coarse spray (ASABE Standard S572.1) and that provide optimum spray distribution and maximum coverage at a minimum of 5 gal/A (GPA).
- Do not apply LUXXUR A HERBICIDE by air in the state of New York.
- For aerial applications, do not apply during a temperature inversion, when wind speed is less than 3 mph or above 10 mph, or when conditions favor poor coverage and/or off-target spray drift.

6.875"

3.4"

Ground Application

For optimum spray distribution and thorough coverage, use flat-fan or low-volume flood nozzles.

- Select nozzles and pressure that deliver medium spray droplets.
- Nozzles that deliver coarse spray droplets may be used to reduce drift, provided spray volume is increased to maintain coverage on small weeds. For optimal product performance and minimal spray drift, adjust the spray boom to the lowest possible spray height listed in manufacturers' specifications.
- Overlaps or starting, stopping, slowing, and turning while spraying may result in crop injury.
- For flat-fan nozzles, use a spray volume of at least 10 GPA.
- For flood nozzles on 30" spacing, use flood nozzles no larger than TK 10 (or the equivalent), a pressure of at least 30 psi and a spray volume of at least 10 GPA. For 40" nozzle spacing, use at least 13 GPA. For 60" spacing, use at least 20 GPA. It is essential to overlap the nozzles 100% for all spacings.
- Use screens that are 50-mesh or larger (metal or nylon).

SPRAY DRIFT MANAGEMENT

The interaction of many equipment and weather related factors determine the potential of spray drift. The applicator is responsible for considering all of these factors when making application decisions. Consult the local Cooperative Extension for additional information. Avoiding spray drift is the responsibility of the applicator.

DROPLET SIZE

To obtain uniform spray coverage and reduce spray drift, equip sprayers with nozzles that provide medium to coarse spray droplets as defined in ASABE Standard S572.1.

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. The presence of sensitive species nearby, the environmental conditions, and pest pressure may affect how an applicator balances drift control and coverage. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly or under unfavorable environmental conditions. When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry. Avoid spraying during conditions of low humidity and/or high temperatures. See **Wind, Temperature Inversions, and Sensitive Areas** sections of this label.

WIND

Drift potential increases at wind speeds of less than 3 mph (due to inversion potential) or more than 10 mph. Applications during gusty or calm wind conditions should be avoided. However, many factors, including droplet size, canopy and equipment specifications determine drift potential at any given wind speed. For applications made in-furrow or below soil-level, wind speed restrictions are not applicable.

Note: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE INVERSIONS

Drift potential is high during temperature inversions and applications should be avoided under these conditions. Temperature inversions are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog. If fog is not present, inversions can also be identified by the movement of smoke or dust from a ground source -- smoke or dust that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion.

SENSITIVE AREAS

When applying adjacent to residential areas, water bodies, habitats known to have threatened or endangered species, or non-target crops, drift can be minimized to these areas by making application when the wind direction is away from these areas.

Aerial Applications

- Mount the spray boom on the aircraft so as to minimize drift caused by wing tip vortices.
- The minimum practical boom length should be used, and should not exceed 75% of the wing span or rotor diameter.
- Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety.

Ground Application

- Wind Speed: Avoid spraying when sustained wind speeds approach or exceed 10 mph. Avoid applications in gusty wind conditions.

HERBICIDE RESISTANCE MANAGEMENT (WSSA) RECOMMENDATIONS

For resistance management, LUXXUR A HERBICIDE is a Group 2 herbicide. Any weed population may contain or develop plants naturally resistant to LUXXUR A HERBICIDE and other Group 2 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Appropriate resistance management strategies should be followed.

To delay herbicide resistance take one or more of the following steps:

- Rotate the use of LUXXUR A HERBICIDE or other Group 2 herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.
- Use tank mixtures with herbicides from a different group if such use is permitted; where information on resistance in target weed species is available, use the less resistance-prone partner at a rate that will control the target weed(s) equally as well as the more resistance-prone partner. Consult your local extension service or certified crop advisor if you are unsure as to which active ingredient is currently less prone to resistance.
- Adopt an integrated weed-management program for herbicide use that includes scouting and uses historical information related to herbicide use and crop rotation, and that considers tillage (or other mechanical control methods), cultural (e.g., higher crop seeding rates; precision fertilizer application method and timing to favor the crop and not the weeds), biological (weed-competitive crops or varieties) and other management practices.

(continued)

6.875"

3.4"

- Scout after herbicide application to monitor weed populations for early signs of resistance development. Indicators of possible herbicide resistance include: (1) failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds; (2) a spreading patch of non-controlled plants of a particular weed species; (3) surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method such as hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields, and planting clean seed.
- If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy or herbicide with a different mode of action, if available.
- Contact your local extension specialist or certified crop advisors for additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.
- For further information or to report suspected resistance contact Bayer CropScience at 1-866-99BAYER (1-866-992-2937). You can also contact your pesticide distributor or university extension specialist to report resistance.

SPECIFIC USE DIRECTIONS

**FOR WEED CONTROL IN WHEAT (SPRING, DURUM AND WINTER)
LUXXUR A HERBICIDE + LUXXUR B HERBICIDE**

Tank Mix Partner	Product Rates fl oz/A	WEEDS CONTROLLED	GROWTH STAGE TIMING
LUXXUR A HERBICIDE	0.214	Weeds controlled by LUXXUR B HERBICIDE alone	Wheat (spring and durum) may be treated from 2 to 6 leaf stage on main stem, plus 3 tillers, but prior to jointing (presence of first node).
+	+		
LUXXUR B HERBICIDE	6.85	Canada thistle*, Perennial sowthistle*, Dandelion, Scentless chamomile, Narrow-leaved hawk's-beard, Lamb's quarter, Cow cockle	Winter wheat may be treated when the majority of plants have two leaves to full tillering, but prior to jointing (presence of first node). Weed growth stages: <ul style="list-style-type: none"> • Canada thistle and Perennial Sowthistle: up to 6 inches in height. • Dandelion: up to 8 inches in diameter; • Scentless chamomile: up to 4 inches in height; • Narrow-leaved hawk's-beard: prior to bolting; • Lamb's quarter and cow cockle: up to 4 inches in height.

*Season long control, with some regrowth in the fall.

6.875"

3.4"

Tank Mix Instructions

For control of weeds not listed on this label, LUXXUR A HERBICIDE may be mixed with other herbicides with the exception of dicamba containing products. It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Read and follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Broadleaf Herbicides			
MCPA Ester ^{1, 3, 4}	Starane ^{®2,3} / Starane Ultra ^{2,3}	2,4-D Ester ^{1,4}	Sentrallas [®]
¹ MCPA Ester and 2,4-D Ester may be added alone, but not as a component of a premix.			
² Equivalent fluroxypyr product may be substituted.			
³ Applications of Luxxur A Herbicide in winter, spring or durum wheat in combination with these EC tankmix partners or equivalents may cause crop response.			
⁴ MCPA Ester and 2,4-D Ester may be added at a rate of no more than 0.25 lb ai/A.			

Grass Herbicides			
Olympus ¹	Osprey	Puma ²	Rimfire Max
¹ Olympus can be added. Refer to Olympus label concerning crop rotation restrictions.			
² Equivalent fenoxaprop-based products may be substituted			

Tank Mixtures for Disease Control

- This product may be tank mixed or used sequentially with fungicides registered for use on wheat.

Tank Mixtures for Insect Control

- LUXXUR A HERBICIDE may be tank mixed or used sequentially with insecticides registered for use on wheat. However, under certain conditions (drought stress, or if the crop is in the 2-4 leaf stage), tank mixes of LUXXUR A HERBICIDE with organophosphate insecticides (such as Lorsban) may produce temporary crop yellowing, or, in severe cases, crop injury. The potential for crop injury is greatest when wide fluctuations in day/night temperatures occur just prior to or soon after application. Test these mixtures in a small area before treating large areas.

USE RESTRICTIONS

- Do not apply LUXXUR A HERBICIDE within 60 days of crop emergence where an organophosphate insecticide has been applied as an in-furrow treatment as crop injury may result.
- Do not use LUXXUR A HERBICIDE with malathion because crop injury may result.

MIXING INSTRUCTIONS

1. Add one-third of the necessary volume of water to the spray tank.
2. With the agitator running, add the required amount of LUXXUR A HERBICIDE. Ensure that the herbicide is completely dissolved before adding other components of the tank mix.
3. When LUXXUR A HERBICIDE is completely dissolved, add the required amount of the appropriate tank mix partners.
4. Specific Tank Mix Instructions:
LUXXUR A HERBICIDE + LUXXUR B HERBICIDE; once LUXXUR A HERBICIDE
(continued)

6.875"

- is completely dissolved, add the required amount of LUXXUR B HERBICIDE, then add required amount of non-ionic surfactant or ammonium sulphate last.
5. Add the rest of the water. If an antifoam agent is required, add this last.
 6. Use a minimum spray volume of 5 GPA for aerial and 10 GPA for ground applications.
 7. Fill tank with fresh water as described in step 1, and continue as directed. Emulsifiable concentrates may make it more difficult to dissolve LUXXUR A HERBICIDE
 8. If the spray preparation is left standing without agitation, thoroughly agitate to resuspend the tank mixture before spraying. Use spray preparation of LUXXUR A HERBICIDE Tank Mix within 24 hours or product degradation may occur.

MINIMUM RECROPPING INTERVAL AND CROP ROTATION GUIDELINES

Observe the rotational cropping restrictions stated on the LUXXUR B HERBICIDE label.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide storage

Store in a cool, dry place.

Pesticide disposal

Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

Container handling

Nonrefillable Plastic and Metal Containers (Capacity Equal to or Less Than 50 Pounds): Nonrefillable container.

Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then, for Plastic Containers, offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances. For Metal Containers, offer for recycling if available or reconditioning if appropriate, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.
