Guaranteed Analysis

Total Nitrogen (N)..... 2%

1.0% Nitrate Nitrogen

1.0% Water Insoluble Nitrogen*

Zinc (Zn)..... 7%

Derived from: Zinc Oxide and Glycine

* 1% Water Insoluble Nitrogen from Glycine

GENERAL INFORMATION

NUE Zinc 7% is manufactured specifically as a liquid foliar fertilizer to be used to help prevent and correct zinc deficiencies that may limit crop growth and yields. NUE Zinc 7% is a supplement to an adequate and balanced soil fertility program.

NUE Zinc 7% is a mixture of non-sulfate sources of zinc, allowing for blending with calcium products, specifically NUE Cal-8.

It is important to monitor crop needs and responses by maintaining an adequate tissue-testing program. When unfamiliar with the effects of foliar applications of minerals it is recommended to perform small-scale field trials.

DIRECTIONS FOR USE

Mixing Directions

1. Be sure spray tank is thoroughly cleaned.
2. Fill 1/2 full with clean water and start agitation.
3. Add other nutrients if compatible.
4. Add NUE Zinc 7% and continue agitation.
5. Adjust pH if necessary.
6. Add pesticides if compatible.
7. Fill tank and agitate thoroughly.

Compatibility - NUE Zinc 7% is compatible with most pesticides.

For maximum nutritional results with tank mixes containing NUE Zinc 7% adjust the final pH to 5.0 -7.0. Use NUE Cal-8 raise to pH of the final tank mix, if necessary. When tank mixing NUE Zinc 7% with pesticides requiring specific pH ranges, always follow pesticide label directions.

Always check compatibility with a jar test before mixing with other fertilizers (i.e. phosphorus). If any precipitation occurs, it may be necessary to add a compatibility agent. Consult your Bio-Gro dealer for more information.

Dilution and Spray Volumes - Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets. It is recommended to use a dilution of at least 20 parts of water to 1 part of NUE Zinc 7%.

SUGGESTED APPLICATIONS

Optimum rate of application will vary between fields depending on soil and/or climatic conditions, stage of crop growth and size of plants.

Application rates are best determined by soil and plant analysis recommendations.

NUE Zinc 7% can be used on many crops where foliar zinc applications are commonly used. Consult your Bio-Gro dealer for specific recommendations.

FOLIAR APPLICATION RATES

Field Crops: Apply 16 to 32 ounces/acre as a directed foliar spray during periods of rapid growth or nutritional demand once plants have reached 4-8 inches in height. NUE Zinc 7% may be applied at 10 to 14 day intervals.

Vegetable Crops: Foliar rate is 16 to 32 ounces/acre. Apply NUE Zinc 7% as needed throughout vegetative development and/or during rapid fruit growth.

Tree and Vine Crops: Apply 16 to 32 ounces/acre during growing season. Applications during veraison should be limited to 16 ounces /acre and used with appropriate adjuvant unless experience dictates otherwise. Repeat applications may be made in 10 to 21 day intervals.

Berry Crops: Apply 8 to 32 ounces/acre of NUE Zinc 7% after active vegetative growth begins. Applications may be repeated in 7 to 14 day intervals.

TIMING -Application timing is likely the most important factor in determining the response and value of foliarly applied nutrients. Understanding the basic physiological functions of a crop is essential in planning proper nutrient timing.

CONDITIONS OF SALE

Seller and/or manufacturer warrants only that this product consists of the ingredients specified on this label. No one is hereby authorized to make any warranty and/or guarantee concerning the use of this product. Being that the use, timing, placement, rate, application and other conditions are beyond the control of the seller and/or manufacturer, the seller's and/or manufacturer's liability for handling, storage and use of this product is limited to replacement of product or refund of purchase price.
