## **PRECAUTIONS:**

KEEP OUT OF REACH OF CHILDREN. Avoid contact with skin, eyes and clothing. Wash concentrate from skin or eyes immediately. Avoid breathing spray mist. ,After use wash hands and other exposed skin. All handlers must wear a long-sleeved shirt and long pants. In addition, wear a chemical-resistant apron during mixing/loading activities. For aerial application, mixers/loaders must wear coveralls over normal working clothes. Wear chemical resistant nitrile gloves (e.g. Edmont Sol-Vex #37-155/#37-145 or Pioneer A-15) which are in good condition when mixing/loading, spraying, and during clean-up and repair. Aerial applicators and applicators using a closed cab are not required to wear chemical resistant gloves. DO NOT apply this product in a way that this product will contact workers or other persons, either directly or through drift. Only handlers wearing personal protective equipment may be in the area being treated during application. Discard clothing or other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. DO NOT reuse them. Users should remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours. Avoid spray drift onto crops other than those recommended. If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., visit CropLife Canada's website at: www.croplife.ca.

Apply only when there is low risk of drift to areas of human habitation or activity such as houses, cottages, schools and recreational areas. Take into consideration wind speed, wind direction, temperature inversions, application equipment and sprayer settings.

## **ENVIRONMENTAL HAZARDS:**

TOXIC to aquatic organisms and non-target terrestrial plants. Observe buffer zones specified under DIRECTIONS FOR USE. This product contains a petroleum distillate which is moderately to highly toxic to aquatic organisms. Avoid contamination of ponds, streams, rivers and other water sources. Avoid contamination of aquatic systems during application. DO NOT contaminate these systems through direct application, disposal of waste or cleaning equipment. To reduce runoff from treated areas into aquatic habitats, consider of the before the characteristics/ conditions site treatment. Site characteristics/conditions that may lead to runoff include, but are not limited to: heavy rainfall, moderate to steep slope, bare soil, poorly draining soil (e.g. soils that are compacted, fine textured, or low in organic matter). It is recommended that this product not be applied when heavy rain is forecast. Potential for contamination of aquatic areas as a result of runoff may be reduced by inclusion of a vegetative strip between the treated area and the edge of the water body.

## FIRST AID:

Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

**If swallowed:** Call a poison control centre or doctor immediately for treatment advice. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

**If in eyes:** Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice. **If on skin or clothing:** Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for

treatment advice. **If inhaled:** Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if

possible. Call a poison control centre or doctor for further treatment advice.

## TOXICOLOGICAL INFORMATION:

This product contains petroleum distillates. Vomiting may cause aspiration pneumonia. Treat symptomatically.

## **STORAGE CONDITIONS:**

Store the container tightly closed, away from seeds, fertilizer, plants and foodstuffs. This PARDNER Herbicide formulation will solidify at temperatures below - 20°C but will become useable again at temperatures above 0°C. Insecticides and fungicides should be segregated from herbicides so as to prevent the possibility of cross-contamination. SHAKE WELL BEFORE USING.

## **RECYCLABLE CONTAINER DISPOSAL:**

Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

- 1. Triple- or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.
- 2. Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

## **RETURNABLE CONTAINER DISPOSAL:**

Do not reuse this container for any purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

## **REFILLABLE CONTAINER DISPOSAL:**

For disposal, this empty container may be returned to the point of purchase (distributor/dealer). It must be refilled by the distributor/dealer with the same product. Do not reuse this container for any other purpose.

## DISPOSAL OF UNUSED, UNWANTED PRODUCT:

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for cleanup of spills.

**NOTICE TO USER:** This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *Pest Control Products Act* to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

Apply only when there is low risk of drift to areas of human habitation or activity such as houses, cottages, schools and recreational areas. Take into consideration wind speed, wind direction, temperature inversions, application equipment and sprayer settings.

**PRE-HARVEST GRAZING INTERVALS**: (wheat, barley, oats and seedling alfalfa) - Do not use treated crops for grazing of livestock or green feed until 30 days after application of PARDNER Herbicide unless otherwise stated on the label. Do not cut treated crops for forage until 30 days after application of PARDNER Herbicide.

**CAUTION**: Do not graze other treated crops or cut for feed unless specified above; sufficient data are not available to support such use.

### **ENVIRONMENTAL HAZARDS:**

TOXIC to aquatic organisms and non-target terrestrial plants. Observe buffer zones specified under DIRECTIONS FOR USE. For disposal, this empty container may be returned to the point of purchase (distributor/dealer). It must be refilled by the distributor/dealer with the same product. Do not reuse this container for any other purpose.

## **DISPOSAL OF UNUSED, UNWANTED PRODUCT:**

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for cleanup of spills.

**NOTICE TO USER:** This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *Pest Control Products Act* to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

## **DIRECTIONS FOR USE:**

**TIMING**: For best results spray when weeds are in the seedling stage. Apply in good growing conditions. Application **must** be made before the crop shields the weeds.

**SPRAYER**: Wash the tank and clean all filters, screens and tips. Select nozzle tips to apply the recommended volume of water per hectare. Flood jet type tips are not recommended. Adjust boom height to ensure uniform coverage of weeds.

**MIXING**: Half fill the tank with clean water. Add the required amount of PARDNER Herbicide and agitate thoroughly. Fill the tank and agitate again before use.

#### FIELD SPRAYER APPLICATION:

- DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty.
- DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE) medium classification.
- Boom height must be 60 cm or less above the crop or ground.
- Spray at 5 10 km/h.
- Ensure that all tips are in good condition and spraying the same volume.

#### **AERIAL APPLICATION (wheat and barley only):**

- Apply only by fixed-wing or rotary aircraft equipment which has been functionally and operationally calibrated for the atmospheric conditions of the area and the application rates and conditions of this label.
- Label rates, conditions and precautions are product specific. Read and understand the entire label before opening this product. Apply only at the rate recommended for aerial application on this label. Where no rate for aerial application appears for the specific use, this product cannot be applied by any type of aerial equipment.
- Ensure uniform application. To avoid streaked, uneven or overlapped application, use appropriate marking devices.

#### **Aerial Use Precautions:**

• Apply only when meteorological conditions at the treatment site allow for complete and even crop coverage. Apply only under conditions of good practice specific to aerial application as outlined in the *National Aerial Pesticide Application Manual*, developed by the Federal/Provincial/Territorial Committee on Pest Management and Pesticides.

- DO NOT contaminate irrigation/drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.
- Do not apply to any body of water. Avoid drifting of spray onto any body of water or other non-target areas. Specified buffer zones should be observed.
- Coarse sprays are less likely to drift, therefore, avoid combinations of pressure and nozzle type that will result in fine particles (mist).
- DO NOT apply during periods of dead calm or when wind velocity and direction pose a risk of spray drift. Do not spray when the wind is blowing towards a nearby sensitive crop, garden, terrestrial habitat (such as shelter-belt) or aquatic habitat.
- Avoid application of this product when winds are gusty.
- DO NOT apply when wind speed is greater than 16 km/h at flying height at the site of application.
- DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE) medium classification.
- To reduce drift caused by turbulent wingtip vortices, the nozzle distribution along the spray boom length MUST NOT exceed 65% of the wingspan or rotorspan.

#### **Aerial Application Operator Precautions:**

- Do not allow the pilot to mix chemicals to be loaded onto the aircraft. Loading of premixed chemicals with a closed system is permitted.
- It is desirable that the pilot have communication capabilities at each treatment site at the time of application.
- The field crew and the mixer/loaders must wear chemical resistant gloves, coveralls and goggles or face shield during mixing/loading, cleanup and repair. Follow the more stringent label precautions in cases where the operator precautions exceed the generic label recommendations on the existing ground boom label.
- All personnel on the job site must wash hands and face thoroughly before eating and drinking. Protective clothing, aircraft cockpit and vehicle cabs must be decontaminated regularly.

#### **Product Specific Precautions:**

• Read and understand the entire label before opening this product. If you have questions, call the manufacturer at 1-888-283-6847 or obtain technical advice from the distributor or your provincial agricultural representative. Application of this specific product must meet and/or conform to the following:

**Volume:** PARDNER Herbicide plus either MCPA or 2,4-D must be applied in volume rates of not *less than* 20 L/ha. For best results when there is a heavy crop canopy, or when the majority of the weeds are cow cockle, green or pale smartweed, hempnettle, redroot pigweed or Canada thistle, a volume rate of 40 L/ha is recommended.

**BUFFER ZONES:** Use of the following spray methods or equipment DO NOT require a buffer zone: hand-held or backpack sprayer, inter-row hooded sprayer, spot treatment, soil drench and soil incorporation.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands), sensitive freshwater habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats.

|              |            |             | Buffer Zones (metres) Required for the Protection of: |          |             |             |         |  |
|--------------|------------|-------------|---|----------|-------------|-------------|---------|--|
| Method of    |            | r           | Fresh   |          | Estuarine   |             |         |  |
| Application  |            | Crop        | Habitat of  |          | Habitats of | Terrestrial |         |  |
| rippircution |            |             | Less  | Greater  | Less        | Greater     | Habitat |  |
|              |            |             | than 1 m  | than 1 m | than 1 m    | than 1 m    |         |  |
| Field        | Δ1         | crops       | 1   | 1        | 1           | 1           | 1       |  |
| Sprayer*     | AL         | letops      | 1   | 1        | 1           | 1           | 1       |  |
| Aerial       | Barley and | Fixed wing  | 20  | 5        | 1           | 1           | 55      |  |
| Actiai       | wheat      | Rotary wing | 20  | 3        | 1           | 1           | 45      |  |

\* For field sprayer application, buffer zones can be reduced with the use of drift-reducing spray shields. When using a spray boom fitted with a full shield (shroud, curtain) that extends to the crop canopy, the labelled buffer zone can be reduced by 70%. When using a spray boom where individual nozzles are fitted with cone-shaped shields that are no more than 30 cm above the crop canopy, the labelled buffer zone can be reduced by 30%.

When a tank mixture is used, consult the labels of the other tank-mix ingredients and observe the largest (most restrictive) buffer zone of the products included in the tank mixture.

### HERBICIDE RESISTANCE MANAGEMENT RECOMMENDATIONS:

For resistance management, PARDNER Herbicide is a Group 6 herbicide. Any weed population may contain or develop plants naturally resistant to PARDNER Herbicide and other Group 6 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Other resistance mechanisms that are not linked to site of action, but specific for individual chemicals, such as enhanced metabolism, may also exist. Appropriate resistance-management strategies should be followed.

To delay herbicide resistance:

- Where possible, rotate the use of PARDNER Herbicide or other Group 6 herbicides with different herbicide groups that control the same weeds in a field.
- Use tank mixtures with herbicides from a different group when such use is permitted.
- Herbicide use should be based on an IPM program that includes scouting, historical information related to herbicide use and crop rotation, and considers tillage (or other mechanical), cultural, biological and other chemical control practices.
- Monitor treated weed populations for resistance development.
- Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment and planting clean seed.
- Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.
- For further information or to report suspected resistance, contact your local Bayer representative, or call Bayer CropScience Inc. toll-free at 1-888-283-6847.

|                         |  |

## **PARDNER Herbicide + ULTIM<sup>®</sup> 75 DF + NON-IONIC SURFACTANT:** EASTERN CANADA

#### DIRECTIONS FOR USE: FIELD CORN ONLY

Apply the PARDNER Herbicide + ULTIM 75 DF tank-mix ONLY when the temperature in the 24 hours before *and* after application ranges between 5°C and 28°C. Temperatures beyond this range increase the potential for crop injury. Separate applications of ULTIM 75 DF followed by PARDNER Herbicide (minimum 12 hours later) will reduce the potential for injury.

Refer to the ULTIM 75 DF label for additional information on Environmental Conditions and Biological Activity.

**MIXING:** Fill the tank about 1/4 full with clean water. Turn on full agitation. Add the required amount of ULTIM 75 DF and agitate thoroughly until water soluble bags are completely dissolved and product is fully dispersed. Add the required amount of PARDNER Herbicide, followed by a non-ionic surfactant while agitating. Fill the remainder of the spray tank. Please refer to the ULTIM 75 DF label for further limitations and precautions on mixing instructions and sprayer cleanup.

## **DIRECTIONS FOR USE: (FIELD CORN ONLY)**

## PARDNER Herbicide + ATRAZINE + ULTIM<sup>®</sup> 75 DF + NON-IONIC SURFACTANT: EASTERN CANADA

#### DIRECTIONS FOR USE: FIELD CORN ONLY

Apply the PARDNER Herbicide + Atrazine + ULTIM 75 DF tank-mix ONLY when the temperature in the 24 hours before *and* after application ranges between 5°C and 28°C. Temperatures beyond this range increase the potential for crop injury. Separate applications of ULTIM 75 DF followed by PARDNER Herbicide (minimum 12 hours later) will reduce the potential for injury.

Refer to the ULTIM 75 DF label for additional information on Environmental Conditions and Biological Activity.

**MIXING:** Fill the tank about 1/4 full with clean water. Turn on full agitation. Add the required amount of ULTIM 75 DF and agitate thoroughly until water soluble bags are completely dissolved and product is fully dispersed. Add the required amount of Atrazine and agitate thoroughly again. Add the required amount of PARDNER Herbicide, followed by a non-ionic surfactant while agitating. Fill the remainder of the spray tank. Please refer to the ULTIM 75 DF label for further limitations and precautions on mixing instructions and sprayer cleanup.
