FOR FOLIAR / SOIL APPLICATION

PRO-CORN™ MIX is recommended as a foliar or soil applied fertilizer for use on any food or fiber crop where the addition of one or more of the nutrients contained in PRO-CORN MIX would be beneficial. A number of variables influence the rate of application necessary to control or correct a specific deficiency. For best results, follow good agronomic practices, soil test and, if necessary, use tissue analysis.

**Foliar Application:** Apply 1 to 2 quarts/acre prior to or immediately after deficiency symptoms occur to prevent or alleviate losses from nutrient deficiencies. Spray carrier (water) volumes of 10 to 20 gallons per acre (ground) or 5 gallons per acre (air) are recommended for best results. When deficiency symptoms are severe, a repeat application of 1 to 2 quarts/acre may be needed 2 or more weeks following the initial application.

**Soil Application:** Apply 1 to 2 quarts/acre as a starter fertilizer in a balanced fertility program.
