DIRECTIONS FOR USE				
<p>ProAcqua™ brand products can be used on all crops grown under field or controlled environments. They are designed to be part of a balanced fertility program. Recommended rates should take into account 1) soil properties (nutrient rates, pH, organic matter, cation exchange capacity); 2) irrigation water properties (alkalinity, soluble salts, pH); 3) weather conditions; 4) tank mix; 5) general crop health; and 6) crop stage. Application of our products at the right time and right place will ensure maximum efficiency.</p> <p>Use in accordance with recommendations of a qualified individual or institution, such as, but not limited to, a certified crop advisor, agronomist, university crop extension publication, or apply according to recommendations in your approved nutrient management plan.</p> <p>When making foliar applications do not mix with strong basic materials (lime, lime sulfur, KOH) or spray oils. Can be mixed with a wide range of crop protectants. Consult the crop protectant label for any information on possible antagonism with certain fertilizers blends.</p>
