Soil Applications:

ReaX Zinc may be applied pre-plant, as a starter, side dress, fertigated, top dressed, or banded to the soil. To apply alone, dilute with water to ensure uniform distribution.

Fertigation:

Can be applied through Center Pivot, Drip and Micro Sprinkler Irrigation systems.

All Crops: 1 to 8 quarts per acre.

Continue irrigation for a minimum of 2 hours after application to flush the lines and to maximize nutrient distribution with drip and micro sprinkler use. Inject after the irrigation water filter.

Transplant Water – All Crops:

1 to 4 quarts per acre not to exceed a 3% solution of ReaX Zinc to water.

Apply in a minimum of 50 gallons solution.

Mixing with water for field storage is generally not recommended. Products blended with water should be used immediately and not stored for prolonged periods.

Aerial Application:

In aerial application use adequate water to obtain thorough coverage.

Caution:

Always check compatibility with other products prior to use.

Do NOT combine with Calcium Fertilizers such as CAN-17.

Fertilizer solutions with a pH of 5 or less may not be compatible.

Combining with liquid fertilizer solutions is more effective if done at a blending plant with vigorous agitation in blending process.

Caution:

Foliar applications close to harvest may leave a brown residue on the harvestable portion of the crop. Rainfall, sprinkler irrigation or high humidity should alleviate this condition.

STORAGE AND DISPOSAL

STORAGE: Store in original containers only. Keep containers tightly closed when not in use. Store in a cool, dry well-ventilated area, preferably in a locked storage area away from children, feed and food products, and seed. Store at ambient temperatures. Do not contaminate water, food, or feed by storage or disposal. **DISPOSAL:** Do not reuse container. Completely empty container into application equipment. Thoroughly rinse container, adding rinse water to the spray tank.
