## Precautions and Instructions

### Spray Preparation

Remove oil, rust, scale, pesticide residues and foreign matter from sprayer and strainer. Flush with clean water. Use 50 mesh screens or equivalent in spray system. Applicator tanks must be equipped with a sparge tube agitator, unless the alternative agitator designs can adequately cleanse the bottom of the tank and provide sufficient agitation required for product mixing. Pump approximately 10% of the tank capacity per minute back into the tank through the agitator.

To prepare for spraying, fill tank to approximately 1/2 the needed volume of water or liquid fertilizer and start agitation. Open product container(s) and pour contents into tank. Agitate to ensure thorough mixing for a minimum of 2 minutes or until product is thoroughly dispersed. Agitate product mixtures continuously during use. Avoid allowing tank contents to remain without agitation for periods greater than 1 hour. When tank contents have remained without agitation for 1 hour or longer, agitate contents for at least 10 minutes before starting application. Avoid allowing large quantities of product mixtures (greater than 5 gallons) to be stored in a non-agitated tank for extended periods of time, such as 12 hours or greater.

**Regent® 4 SC insecticide** can be tank mixed in accordance with the most restrictive of label limitations and precautions. **DO NOT** exceed any label dosage rates. This product cannot be mixed with any product whose label contains a prohibition against such mixing.

If tank mixes with other products are to be used, evaluate tank mix compatibility with **Regent 4 SC** in a small container before mixing larger quantities in the application tank.

### Compatibility

The full range of compatibilities with **Regent 4 SC** under local conditions is not known. Therefore, it is essential that before using **Regent 4 SC**, the compatibility of the mixture be established. For example: Fill a quart jar 1/2 full of water or liquid fertilizer, then add 2 teaspoons of **Regent 4 SC** and disperse. Add any other pesticides, fertilizers, or tank mixtures and shake thoroughly. **DO NOT USE MIXTURES THAT CURDLE, PRECIPITATE, OR GREASE. FOR BEST RESULTS, USE SPRAY MIXTURES IMMEDIATELY AFTER MIXING. USE ADEQUATE AGITATION.**

## Use Restrictions

- **DO NOT** apply this product through any kind of irrigation system.
- **DO NOT** harvest within 90 days of application.
- **DO NOT** plant any rotational crops other than those listed in the **Rotational Crop Restrictions** section within 12 months following application.
- Observe the following precautions when applying in the vicinity of aquatic areas: **DO NOT** apply within 20 yards of lakes, reservoirs, rivers, permanent streams, marshes, natural ponds, estuaries, commercial aquaculture facilities or other bodies of water that convey water to these areas. Protection of aquatic areas may be enhanced by maintaining all or a portion of this buffer in vegetative cover.
- **DO NOT** use this product if the potato is planted by hand.

## Use Directions for Potato

### Pests Controlled and Application Method

Crop	Pests Controlled	Application Method
Potato	Wireworms	Make one in-furrow application at time of planting only. Banding must be done in furrow as a 5-inch to 7-inch wide band. <b>Regent 4 SC</b> must be thoroughly incorporated and covered with soil immediately after application. <b>DO NOT</b> use T-banding over the top of a closed furrow.

## Application Requirements

Make one in-furrow application at planting time only. **DO NOT** apply this product through any kind of irrigation system.

Dilute **Regent 4 SC** in a minimum of 5.0 gallons of water or liquid fertilizer per acre. If flat-fan nozzles are used for in-furrow application, align the nozzles with the row to direct the spray into the open furrow.

**Regent 4 SC** can be directly injected into the suction or pressure line(s) of a liquid spray system provided that the product is uniformly dispersed into the water or liquid fertilizer. Predilution of **Regent 4 SC** in a minimum of 0.5 gallon of water or liquid fertilizer per acre prior to injection is necessary to improve metering accuracy. The mix tank of **Regent 4 SC** plus water or liquid fertilizer must be agitated continuously. After completing direct injection in the mixing process, apply in-furrow a minimum final volume of 5.0 gallons per crop acre of water, liquid fertilizer, or a combination of the two.
