GENERAL INFORMATION

RNA 12% ZINC SULFATE SOLUTION is formulated primarily for foliar applications to prevent or correct zinc deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality. Application of **RNA 12% ZINC SULFATE SOLUTION** is a means of obtaining a quick response to needed elements. Foliar applications of **RNA 12% ZINC SULFATE SOLUTION** may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system. Avoid foliar nutrient applications to crops during periods of moisture, salinity or heat stress. Applications of foliar nutrients to sensitive crops such as leafy vegetables or soft-skinned fruit during periods of excessive temperatures may cause cosmetic injury.

DIRECTIONS FOR USE

MIXING INSTRUCTIONS:

Apply in sufficient water for thorough coverage. For aerial applications, use at least 1 gallon of water per pint of product. Put 1/3 to 2/3 of total required water volume in tank. Add recommended amount of this product before adding pesticides, adjuvants, or other fertilizers. Agitate until thoroughly mixed, then fill tank with remainder of water.

COMPATIBILITY

Always jar test new combinations for compatibility prior to field mixing. When mixing with high polyphosphate fertilizers, do not exceed a phosphate/zinc ratio of 10:1. Do not tank mix with carbamate pesticides as efficacy will decrease.
