## GENERAL INFORMATION

**RNA HP MULTI-MIN** is designed for foliar applications to prevent or correct trace element deficiencies that may limit crop growth and yields. This proprietary water soluble formulation is readily available to the plant because of the natural complexing properties of soy protein hydrolysate. It is intended for foliar applications and is non-toxic to plants when applied as directed. This product can be included in a regular spray program on all field, root, vegetable, fruit and vine crops, and turf and ornamentals.

## DIRECTIONS FOR USE

**SHAKE WELL BEFORE USING. KEEP FROM FREEZING.**

Dilute one part **RNA HP MULTI-MIN** with 20 or more parts water. Apply with an adequate amount of water that will provide complete coverage. Use of a nonionic wetting agent may improve spray coverage of certain hard-to-wet plants. **Do not apply undiluted.**

The rate of application will depend on the crop, stage of growth, and severity of deficiency. The maximum recommended rates are for mature, full-sized plants. Reduce the rates proportionately when spraying smaller plants.

**APPLE/POME:** Apply 2-32 fluid ounces per acre before blossoming and shortly after petal fall. **DO NOT** apply to pear fruit as this product will mark the fruit.

**TREE NUTS:** Apply 2-32 fluid ounces per acre shortly after petal fall.

**GRAPES AND BERRIES:** Apply 2-32 fluid ounces per acre shortly after blossoming.

**POTATOES:** Apply 2-32 fluid ounces per acre at row closure. Repeat as needed during periods of rapid growth or nutritional stress.

**BEANS:** Apply 2-32 fluid ounces per acre at first cultivation and 12-14 days before blossoming.

## COMPATIBILITY

Consult with your local ag representative on compatibility with other spray materials. Always jar test new combinations for compatibility prior to field mixing. Avoid mixing with fertilizers containing phosphate.
