TILL-IT EARLY HARVEST should be used as part of a comprehensive Total Nutrition System® for optimizing plant growth, development, yield and quality.

DIRECTIONS FOR USE

Moisture conditions and planting strategies are important considerations when using **TILL-IT EARLY HARVEST**.

POP-UP APPLICATIONS: Apply 1-5 gallons per planted acre on seed as established by local agricultural practices. **TILL-IT EARLY HARVEST** may be diluted with water for ease of calibration if needed. When applied in the seed furrow on very dry soils, a post plant irrigation within 24 hours is recommended. Use **CAUTION** when applying directly to the seed in very saline soils as there may be a risk of seedling injury.

STARTER APPLICATIONS: Apply 1-8 gallons per acre as a band directly below the seed or 5-20 gallons below and to the side of the seed line. **TILL-IT EARLY HARVEST** may also be applied as a surface spray band over the top or to the side of the seed prior to planting. Bluegrass, canola, rape, mustard, soybeans, and other small seed crops should have **TILL-IT EARLY HARVEST** placed no closer than 2 inches from the seed.
