GENERAL INFORMATION

VERSATILE® IRON-SHIELD® DG is a granular micronutrient fertilizer iron product chelated with 100% ortho-ortho EDDHA for maximum stability and effectiveness. **VERSATILE IRON-SHIELD DG** is effective and safe for soil applications where soil chemistry is prone to product iron chlorosis. It is stable across a wide range of soil pH levels.

VERSATILE IRON-SHEILD DG should be used as part of a comprehensive Total Nutrition System® for optimizing soil/nutrient conditions for plant growth, development, yield and quality.

DIRECTIONS FOR USE

VERSATILE IRON-SHIELD DG may be applied on all tree, vine, field, row or vegetable crops by banding in-furrow or to correct iron chlorosis in high pH soils. Timing of treatments should be based on crop nutrient demand, prevailing environmental conditions, plant tissue analysis data or other information that indicates a need for supplemental iron.

SOIL APPLICATION:

For Soybeans: Apply 5-25 pounds per acre as an in-furrow or planting band application. For moderate to severe iron chlorosis, apply 15-25 pounds per acre as an in-furrow or planting band application.

All other crops: Apply 5-30 pounds as a band or in-furrow. For areas with historical iron chlorosis, applying **VERSATILE-IRON SHIELD DG** close to the seed or root zone is recommended.

COMPATIBILITY

VERSATILE IRON-SHIELD DG can be co-applied with other seed-safe nutrient sources. Before application close to the seed, consider the total salt index and soil type for the rate of fertilizer application.

Always jar test new combinations for compatibility before field mixing.
